Financial residential attractiveness

Factsheet | Fischbach (Edition 2021)

Credit Suisse study on the financial residential attractiveness of Swiss municipalities and cantons

The cost of living varies from one part of Switzerland to another. Credit Suisse economists have calculated the total disposable income - i.e. the amount of household income left over for discretionary spending or saving after deducting all mandatory expenses and fixed costs - of more than 120,000 sample households across every municipality in Switzerland.

Dynamic web tool: credit-suisse.com/rdi

In addition to the study, you can also find a web tool at creditsuisse.com/rdi that shows the most important results of the study using interactive maps. Alongside the financial residential attractiveness, information is also available on the factors that determine the assessment, first and foremost mandatory charges, fixed costs, commuting costs, and the cost of external childcare.
